

ABSTRACT OF THE DISCLOSURE

The invention concerns a method for communicating structured information, for a example a report or an account, between a first user and at least one second user. Said method comprises a step which consists in defining a document standard (800), which determines the general frame of said document in the form of a series of titles and/or conventional meanings and authorized values of certain conspicuous information fields. The transmitting user inputs (808) data to be supplied incorporating a step of inputting text and/or titles as a supplement to said general frame and/or a step of selecting values on said conspicuous fields and transmitting (814) data of the document addressed to the second user. Each recipient user selects (822) a sorting criterion based on the titles or said conspicuous fields. The document is then reorganized (824) in accordance with the selected criterion and a step of supplying (826) to said second user said document reorganized in accordance with said criterion.
